PF Formation Pty Ltd Company Statement - Natural Sands and Quarry Products

PF Formation Pty Ltd are suppliers of Natural Sands and other natural quarry products. We operate several sandstone and Tertiary Sand quarries in Maroota NSW under various development consents.

All our quarry products are quarried from our Maroota operations, derived from naturally occurring Hawkesbury Sandstone and Tertiary Sand deposits identified in the area through geological investigations. The process involves first winning the naturally occurring reserves with bulldozers and excavators then dry and wet processing to remove oversize material, clays, and silts from the reserves.

No chemicals are used during the process and the material is free from any process residues from industrial, chemical, or agricultural activities and does not contain any sulfidic ores or soils or any other waste.

Although our quarry products are derived from VENM as provided in Part 3, Schedule 1 of the *Protection of the Environment Operations Act 1997* the processed products we produce cannot technically be given the waste classification VENM as it is a processed product and is stored on site.

Yours sincerely
